

PIZZA

IME® Everything what a pizza baker needs.

2021/2022

IME®

reliable ovens for
over 70 years

The IME brand has stood for absolute perfection in ovens and gastronomic technology for more than 70 years. When IME was founded in 1950, nobody knew that their ovens would one day be sold across the world.

Major highlights include receiving the first patent for ovens in 1957 and bestowal of the Austrian National Coat of Arms as a special award for success in the exporting business in 1975. The 40,000th oven was produced in 1981.

IME invented the IME heating system and full chamotte technology in 1985, becoming a role model for the entire industry.

Today, IME GmbH sells more than 2000 ovens per year in almost 30 different countries worldwide and is continuously expanding its expertise as the European oven specialist and commercial kitchen supplier.

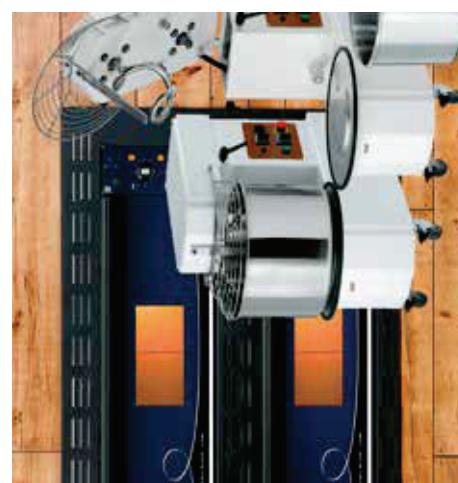

Tireless development and consistent growth guarantee the company's significant role in this competitive market.

You will find all details and information about pizza ovens,
cooling tables and much more!

Pizzabaking today and in days gone by

// 1st class manufacturer of pizza ovens for over 70 years

// The IME pizza ovens, combined with **IME heating technology**, take your baking quality to a higher level, which is best known from wood heated brick ovens, only easier and more economical. Thanks to the overall chamotted oven chamber the heat stays there - even when the oven door is open. The memory effect of the chamotte in the entire chamber has the result of an uniform heat distribution and thereby the best baking result. At the same time, compared to conventional techniques, an energy saving of 40 % is obtained.

// **Infra Stone technology** only on the bottom. Radiant heat is provided at the top by a large armoured tubular heating element. This provides faster heating. This technology is less expensive and very useful when ovens is not operated all day. 5 year guarantee!

// Robust design and **high-quality stainless steel** enclosures, produced in-house, subject to strict quality inspection criteria. And should the unexpected happen, IME provides a delivery guarantee for all spare parts well beyond the statutory period.

// An **ergonomically formed grip** with an enamelled surface that cannot overly heat up. Most lines have a continuously formed handle that goes over the whole door and is compatible with right and left handed people. Not only an attractive element of design but also convenient in everyday use.

// A **large oven window with thermal glazing**, the centre glass pane has a transparent, heat reflective silver vapour coating. This reduces energy losses and distributes temperatures evenly in the oven. (Excelsior models are triple-glazed, Premio models are double-glazed)

// **Oven exhaust for an improved baking atmosphere**. Smoke and odours - for example from residues on the chamotte - are eliminated. The key, of course, is correct dimension of the opening.

// Generous fitted **interior lightning** in almost all pizza oven models ensure easy checking on the baking progress.

// Thanks to **two thermostats**, the top and bottom heat are continuously variable from 0 to 500° C.

The secret of the IME Infra Stone® „Technology“

An unlimited life-span is almost certain because **mechanical damage to the heating elements is impossible**. Furthermore, **surface loading on the heating coils is reduced considerably**. We certify this with a 10 year guarantee!

Advantages of Infra Stone®

- // Energy-saving due to optimal heat transmission (100% efficiency, no transmission loss, reduced surface loading on heating elements)
- // Friendly customer service when necessary (Plate easily replaceable)
- // Ideal heat distribution and storage due to 7 meter-long heating coils per plate and full chamotte interior
- // Moisture-controlled baking climate thanks to fully stone-lined oven chamber and the absorbing capacity of the plates. This ensures the unique baking atmosphere

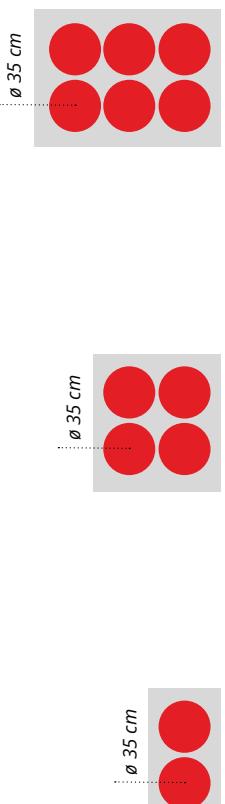

Series EXCELSIOR

Series EXCELSIOR NEW

The TOP Line

The best thing ever developed in pizza technology. Perfect baking results, energy-saving and trouble-free operation for decades. 20 years ago IME caused a global sensation worldwide their full chamotte technology „VS“ - developed in-house - and the unsurpassed integrated heating technology of the „Intra Stone“. This technology has been developed to perfection and is relied upon in over 40 different countries. Thousands of delighted customers are our best reference. Regardless of what you are baking - delicious pizza or other delicacies - your Excelsior Pizza Oven lives up to its name, and will exceed all your expectations.

A line that makes sense 1 DECK

Unlike the Excelsior flagship series, this series is only equipped with the IME Heating Technology at the bottom. Heat at the top is generated by an exposed tubular heating element. This makes heating up much faster. At the same time, this configuration offers even heat distribution and storage of the heat from above. An additional chamotte panel is attached above the tubular heating element, ensuring uniform radiation.
